

GreenData Manager

Powerful Green Data Collection and Management

Data Collection: Frustration in Green Compliance Management

Data collection is the most resource-demanding task in the process of green compliance management for the electronics industry. It can be as simple as collecting RoHS compliance status and certificates from suppliers, or as complicated as requesting the full disclosure of material composition substances at the homogeneous level, and validating this info with EU RoHS, China RoHS, Korea RoHS and even Norwegian PoHS. Or it can be as trivial as collecting MSL and peak temperature for Pb-free manufacturing from suppliers, or as detailed as requesting tin-whisker mitigation strategies on different terminal plating materials and collecting the JESD-201 tin-whisker test reports. You also need to worry about whether documents are still valid or if test reports or certificates need to be recollected.

Data collection is mandatory but you have limited resources. You need a tool to manage your data collection, provide validation analysis on green compliance for different RoHS regulations, and remind you when documents expire.

You need GreenData Manager from GreenSoft Technology.

GreenData Manager: The Best Productivity Tool for Your Green Data Collection

GreenSoft has experience in collecting component info from more than 5000 suppliers worldwide—we know exactly how to put your data and documents in order. GreenData Manager is a simple desktop application to manage your collection of data and documents on all components. It also reports the status for each component and aggregates the status to BOM or product level.

Feature Highlights:

- ▶ Report the “completeness” status of your data – define your own required fields for calculating completeness
- ▶ Report the compliance status on all parts or BOMs – define your own compliance rules per your customers’ requirements
- ▶ Provide validation on the required material composition substances for each component and aggregate the status to products or BOMs
- ▶ Perform detailed management on collected documents and report their status individually
- ▶ Let GreenSoft do your data collection by tapping into our expansive database - get a quote within 24 hours

NEW Free Trial !
